Summary

Full Stack Software Engineer with a strong technical background and ongoing bachelor's degree in Software Engineering. Experienced in Web and Mobile (especially Flutter) application development, software architecture, RESTful APIs, relational and non-relational databases, and modern development practices. My proudest project was leading the automation of an AI-powered workflow, which not only increased efficiency by 90% but also eliminated a major pain point for the team. I have a proven ability to solve complex problems, apply design patterns, and deliver scalable and easily maintainable solutions.

Experience

Moderna Soluções | Apr 2023 - Present | Remote
Full Stack Software Engineer

- **Architected and implemented the end-to-end Marketing and Sales funnel on the Exact Sales platform**, centralizing lead management and automating the qualification workflow for the entire sales team. This resulted in a 30% increase in qualified leads per month and reduced the sales cycle time by 15%.
- **Led the integration of an AI Virtual Assistant into the website, fully automating the lead capture pipeline**. The solution, built on the Exact Sales platform with python, reduced customer response time to <1 second and directly resulted in the acquisition of 4 new enterprise clients, impacting revenue growth.
- **Developed and deployed a scalable, automated messaging system using N8N and the Twilio API**, enabling the automated sending of over **10,000 messages per month**. This increased B2B client **engagement by 25% and achieved a 65.3%** open rate for notifications sent to end-users.
- **Conceived and developed a new scheduling module from scratch for Gesthor Prime, the company's proprietary ERP.** I architected and implemented the module, which resolved a critical bottleneck, increased client efficiency by 73.6%, and reduced dependency on third-party systems by 90%, internalizing revenue previously lost to competitors.

Hubby | Jan 2025 – Jan 2026 | Remote
Tech Lead | Full Stack

- **Led the design and development of an ERP system**, defining a scalable monolithic architecture for MVP and early growth.
- **Owned system architecture, design patterns, and stack selection**: Next.js, React, TypeScript, Prisma, Tailwind CSS.
  Built CI/CD pipelines and implemented unit tests (Jest) to ensure code quality and reliable deployments.
  Established observability with Datadog, monitoring performance, logs, and key system metrics.
  Integrated third-party APIs, including Google APIs and Brazilian tax services (ReceitaWS, CFPHub).
- **Developed real-time dashboards using WebSockets and Redis** for caching and session management.
- **Led the engineering team using Agile Scrum**, facilitating daily stand-ups and delivery alignment.
- **Ensured LGPD compliance**, authoring Terms of Use and applying data security best practices.

Guizi Consultoria | Mar 2025 - Jul 2025 | Remote
Freelancer

- **Designed and implemented responsive websites** for digital product launches, **applying modern frontend architectures** (component-based design, reusable UI patterns) and optimizing SEO fundamentals to improve discovery and conversion.
- **Applied design patterns, such as MVC and Dependency Injection**, to structure scalable and maintainable codebases, ensuring a clear separation between presentation and logic layers.
- **Integrated websites with third-party applications and social media APIs**, extending functionality, user engagement, and digital presence through cross-platform connectivity.
- **Supported the creation and delivery of audiovisual content**, using AI-based tools to accelerate editing workflows and enhance creative quality.
- **Collaborated in agile teams, applying version control (Git/GitHub),** task management, and time optimization practices to meet strict deadlines in digital campaigns.

Education

PUC Minas | Feb. 2026 – Present
Bachelor's Degree in Software Engineering

Software Engineering Fundamentals, Algorithms and Data Structures, Object-Oriented Programming, Discrete Mathematics, Computational Logic, Software Requirements Engineering, Systems Modeling (UML), Software Architecture, Design Patterns, Software Quality and Testing (Unit, Integration, and Automated Testing), Relational and Non-Relational Databases, Operating Systems, Computer Networks, Web and Mobile Development, DevOps and Continuous Integration / Continuous Delivery (CI/CD), Version Control with Git and GitFlow, Development and Consumption of RESTful APIs, Information Security, Ethics and Digital Law (LGPD), Agile Methodologies (Scrum and Kanban), Software Project Management, Complex Problem Solving, and Capstone Project.

Cotemig | Jan 2022 - Nov 2025 | Completed
Technical Degree - Specializing in Web and Mobile Development

Native Android (Kotlin/Room) and iOS (SwiftUI, UIKit) application development, Flutter with Firebase, HTML/CSS/JS/TypeScript and PHP for Web development, Responsive Interfaces, Database Modeling with MongoDB (BSON) and MySQL, Software Architecture and Design Patterns (Singleton, Factory, Facade, Atom, Strategy, Composite), Complex Problem Solving, Code Versioning with Git and GitFlow, consumption and creation of RESTful APIs, Digital Law (LGPD), Robotics, Project Discovery.
